

Please upload for every problem a single pdf file named **Group_Pr_X_Last Name_First name{s}_CS_en_3Feb2021.pdf** where Group is the number of your group (ex 30311) and X is the number of problem. Please upload **only** in the appropriate assignment.

To be considered the problem, the **turn in** option should be checked.

Linear algebra, winter 2021, CS.

Problema 1

1. Write the equation of the line (d) which is parallel to the intersection of the planes $(P_1) : x - y + 2z + 2 = 0$ and $(P_2) : 2x - 3y + 4 = 0$ and passes through the point $A(-3, -2, -1)$.
2. Find the symmetric of $B(1, 2, 3)$ with respect to (d) .
3. Find the equation of a plane which contains the line $(d_1) = (P_1) \cap (P_2)$ and is parallel to the line $\frac{x}{2} = y - 1 = \frac{z+5}{3}$.

Note. In the file submitted please write computations, explanations and everything needed for a better understanding of the problem.
