

a) The mobile phone - support actor

It is an external system that offers the functionality of running the internet banking application.

b) The information system tester - multiple roles: primary actor and stakeholder because he's the one who starts testing use cases and is interested in system's good behaviour

c) The bank (as Owner of the IS) - stakeholder

It's interested in a good functioning system in order to deliver the expected quality. It may suffer financially due to the system

d) The Bank owner - stakeholder

He's interested in the quality of the system in order to be profitable and attract more clients.

e) The call-center operator - multiple roles: primary actor and stakeholder. The operator interacts with the system by searching product's information; is interested in the usability of the system.

f) The bank client - multiple roles: primary actor and stakeholder. He's the starter of some use cases (e.g. retrieve information from ATM) and plays the main role in interacting with the system. He is also interested in the availability and quality of the system (the system should offer it's services whenever the client needs them) both through the mobile app and ATM.
