Time taken	10 mins 51 secs
Grade	5.83 out of 6.00 (97.22%)
Feedback	

Question **1**

Complete

Mark 0.50 out of 0.50

[Flag question](#)

What is a DAG file?

A DAG file is submitted to DAGMan and it describes the jobs and dependencies between those jobs, as PARENT or CHILD relationships.

Question **2**

Complete

Mark 0.50 out of 0.50

[Flag question](#)

What is a Condor pool?

A Condor pool consists of nodes (computers) that run Condor middleware and are connected to a local network. Each node in the pool has a predefined role.

Question **3**

Complete

Mark 0.50 out of 0.50

[Flag question](#)

When a job in a DAG fails, a

rescue file

 file will be created.

Question **4**

Complete

Mark 0.33 out of 0.50

[Flag question](#)

Some examples of GRID middlewares are:

Select one or more:

☒ a. OGSA

☒ b. Condor

☒ c. Globus

☐ d. gLite

Question **5**

Complete

Mark 0.50 out of 0.50

[Flag question](#)

Mandatory commands in the submit description file are:

Select one or more:

☐ a. output

☐ b. universe

☒ c. queue

☒ d. executable

☐ e. input

☐ f. log

Question **6**

Complete

Mark 0.50 out of 0.50

[Flag question](#)

Choose the erroneous line in the dag file:

Select one:

☐ job a joba.sub

☐ job c jobc.sub

☐ job b jobb.sub

☐ job d jobd.sub

☐ parent a child b c

☒ parent c child a

☐ parent b child d

Question **7**

Complete

Mark 0.50 out of 0.50

[Flag question](#)

Select true statements. Condor_master process:

Select one or more:

☒ a. starts all Condor processes

☒ b. serves all management commands

☐ c. runs only on the central manager

☐ d. collects information about Condor processes

Question **8**

Complete

Mark 0.50 out of 0.50

[Flag question](#)

Select true statements. Condor_collector process:

Select one or more:

☐ a. runs on all condor nodes

☐ b. manages submitted jobs to machines

☒ c. collects information from Condor processes

Question **9**

Complete

Mark 0.50 out of 0.50

[Flag question](#)

Select true statements: Condor_schedd process:

Select one:

☐ a. manages job execution on each machine

☐ b. matches jobs with available machines

☒ c. manages the job queue for each machine

Question **10**

Complete

Mark 0.50 out of 0.50

[Flag question](#)

A Condor universe is:

Select one:

☐ a. a process

☐ b. a set of nodes

☒ c. an execution environment

Question **11**

Complete

Mark 0.25 out of 0.25

[Flag question](#)

Job B depends on the output of Job A. Complete the missing part of the DAG file:

job A jobA.sub

job B jobB.sub

Answer:

parent A child B

Question **12**

Complete

Mark 0.25 out of 0.25

[Flag question](#)

The command for submitting jobs is:

Answer:

condor_submit

Question **13**

Complete

Mark 0.50 out of 0.50

[Flag question](#)

The command to obtain information about all job queues in the condor pool is:

Answer:

condor_q -global
