Started on	Wednesday, 24 May 2023, 4:16 PM
State	Finished
Completed on	Wednesday, 24 May 2023, 4:21 PM
Time taken	5 mins 41 secs
Grade	5.00 out of 6.00 (83.33%)
Feedback	

Question **1**

Complete

Mark 1.00 out of 1.00

[Flag question](#)

How do you specify the number of processes to be created for an MS-MPI program?

The number of processes to be created for an MS-MPI program can be specified with the mpiexec command.

We use 'mpiexec -n no_of_processes', followed by the path to the executable of the program we want to run.

Question **2**

Complete

Mark 1.00 out of 1.00

[Flag question](#)

Each process has computed the sum for a portion of a vector. Which function will compute the final sum of the elements of the vector in one step?

- Select one:
- ☒ a. MPI_Reduce
 - ☐ b. MPI_Recv
 - ☐ c. MPI_Gather

Question **3**

Complete

Mark 1.00 out of 1.00

[Flag question](#)

To synchronize a subset of your parallel processes using MPI_Barrier you need to:

- Select one:
- ☒ a. Create a group with the subset of processes and then use MPI_Barrier
 - ☐ b. Create a group with all processes then use MPI_Barrier on required processes
 - ☐ c. Directly use MPI_Barrier on required processes

Question **4**

Complete

Mark 0.00 out of 1.00

[Flag question](#)

MPI is:

- Select one:
- ☒ a. a library for message passing functions in C
 - ☐ b. a standardized and portable message passing standard
 - ☐ c. a C implementation of the message passing paradigm

Question **5**

Complete

Mark 1.00 out of 1.00

[Flag question](#)

You need to split a vector and transmit equal pieces of it to all processes. What communication functions will you use?

- Select one:
- ☐ a. MPI_Send, MPI_Recv
 - ☐ b. MPI_Bcast
 - ☒ c. MPI_Scatter

Question **6**

Complete

Mark 1.00 out of 1.00

[Flag question](#)

Select true answers. MPI_Gather function:

- Select one or more:
- ☐ a. Takes elements from each process, gathers them and makes them available to all processes
 - ☒ b. At the end, elements are ordered by the rank of the process from which they were received
 - ☐ c. Takes elements from each process, applies a function and gathers them to the root process
 - ☒ d. Takes elements from each process and gathers them to the root process
 - ☐ e. At the end, elements are not ordered
